Vaginal Swab Examination C/S

P:Pos-:N:NegS:SensitiveI:IntermediateR:Resistant

Vaginal smear and culture was suggestive of Aerobic Vaginitis.

Assessment of Gram stain is based on Nugent Scoring System
Nugent Score = 4, which is considered indeterminate for Bacterial Vaginosis. Vaginal smear gram stain shows altered vaginal flora.

***This is reported as critical result for pregnant women from 36-38 weeks of gestation.

Please correlate clinically.

Bacterial Identification and Antimicrobial Susceptibility Test were performed on Vitek2Compact Advance Expert System (AES).

Test	Result	Unit	Ref. Range
Prolactin	37.94	H ng/mL	4.79 - 23.3
Comments Vitamin Intake especially Biotin (Vitamin B7) can interfere with the prolactin result, patient must stop vitamin intake 24 hours before prolactin test. The release of prolactin is promoted physiologically by suckling and stress. In addition, elevated serum prolactin concentrations are caused by a number of pharmaceuticals (e.g. dibenzodiazepines, phenothiazine), TRH and estrogen.
