Comments

Vitamin Intake especially Biotin (Vitamin B7) can interfere with the prolactin result, patient must stop vitamin intake 24 hours before prolactin test.

The release of prolactin is promoted physiologically by suckling and stress. In addition, elevated serum prolactin concentrations are caused by a number of pharmaceuticals (e.g. dibenzodiazepines, phenothiazine), TRH and estrogen.

* Thyroid Stimulating Hormone (TSH)	1.05	uIU/mL	0.35 - 4.94
