**HYSTEOSALPINGOGRAM (HSG) REPORT:**

- Technique: The uterine cavity filled with contrast medium through uterine catheter equipped with small balloon to hold tube in place
- Contrast: approximately 20 ml of water-soluble contrast medium (Omnipause 300 mg I/ml)
- Comparison: none
- Clinical history: infertility workup.

**FINDINGS:**

- The uterine cavity is within normal limits of size shows regular outline with no evidence of filling defect or abnormal indentations seen.
  - The cervical canal is within normal limits of length and shows regular borders with competent internal os.
  - Both fallopian tubes are visualized with normal caliber and normal contrast media spilling into peritoneal cavity.
  - Late control film reveals normal peritoneal smearing.
- N.B: venous intravasation accidentally happened.

**IMPRESSION:**

- Unremarkable HSG study in term of uterine cavity and patent both fallopian tubes.
